

Video Insertion Procedure for Kiosk frontend only

1. Insert Video to the Video Asset Folder

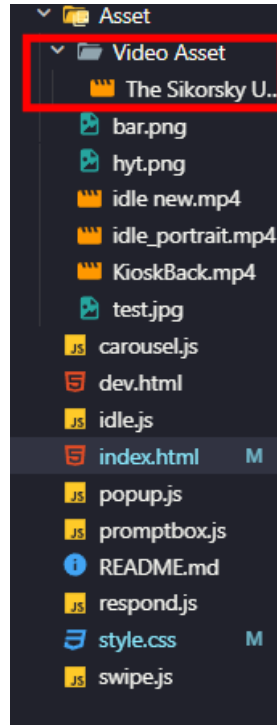

Figure 1: The Video Asset folder contain only items that will be played

Video Asset folder should only contain the Video Assets that will be played and note that it is under the Asset folder.

2. Put the video inside the slider

```
<!--How to insert a video-->
<label class="item" for="t-1">
  <video class="popup-video" autoplay loop muted>
    <source
      src="Asset/Video Asset/The Sikorsky UH-60M BLACK HAWK Helicopter.mp4"
      type="video/mp4"
    />
    This kiosk does not support the file type.
  </video>
</label>
```

- The video should be inside of a <label> with the class "item".
- With the for being inputted with the t attributed with number depending on what number is the video on the carousel (ex. t-1)
- It should be on "autoplay loop muted" setup to have the play effect on the carousel

3. Create another input to identify the video

```
<div class="slider">
  <input type="radio" name="testimonial" id="t-1" />
  <input type="radio" name="testimonial" id="t-2" />
  <input type="radio" name="testimonial" id="t-3" checked />
  <input type="radio" name="testimonial" id="t-4" />
  <input type="radio" name="testimonial" id="t-5" />
</div>
```

Create another input just like above and change the id to the corresponding value “t-?” of the video

4. Create a dot for the carousel

```
<div class="dots">
  <label for="t-1"></label>
  <label for="t-2"></label>
  <label for="t-3"></label>
  <label for="t-4"></label>
  <label for="t-5"></label>
</div>
```

Create a dot for the items with the for being the value again of the video (ex. t-1)
